

“THE SDV. FINANCE MANIFESTO”

There's a reason this isn't a whitepaper. Meh. That's boring. This is deeper, much deeper. It's a conviction. A conviction that's deeply rooted in us. A force that's out to do good. We're a movement and we're just getting started.

SDVF or Stop Domestic Violence (Finance) is on a mission to change the world AND crypto. We're not a meme or charity coin. We're a MOVEMENT coin. A coin that's on a mission to bring awareness to domestic violence as well as disrupt how token swaps get done. This is our MANIFESTO.

We hope that by the time you're done reading this, you'll fully understand we're not a typical charity coin - we're truly out to change the world.

Imagine all of the best in crypto coming together... inside ONE project.

SDV. FINANCE

THE 4 PILLARS OF SDV.FINANCE

**Charity | High Yield Staking | Auto Compounding | Custom Swapping
Platform With Unique Features Never Incorporated Before**

Let's start with the charity piece ...

We're partnering with some of the leading global organizations that are helping victims of domestic violence. We don't just cut them a check that's too easy and NOT in full alignment with our vision.

We'll be using their resources, their network, their contacts and much more to be able to provide victims of abuse with counseling and therapy related services.

Whether in person, over the phone or video chats. In exchange for our donations, we'll be able to provide our holders with a level of support and many services that they've likely never had

SDV.FINANCE

access to. And, we'll be doing this without charging them a dime. Because that's the arrangement we're making with our partners.

We donate. They share resources, therapy providers and councilors... everyone wins.

Staking Image Here

The next piece we've integrated is staking. Not your average staking platform though. This is staking on steroids. Projects have been vetted to ensure they're safe and that there is no risk for a rug pool (or any of the other shenanigans that unfortunately take place in this great industry).

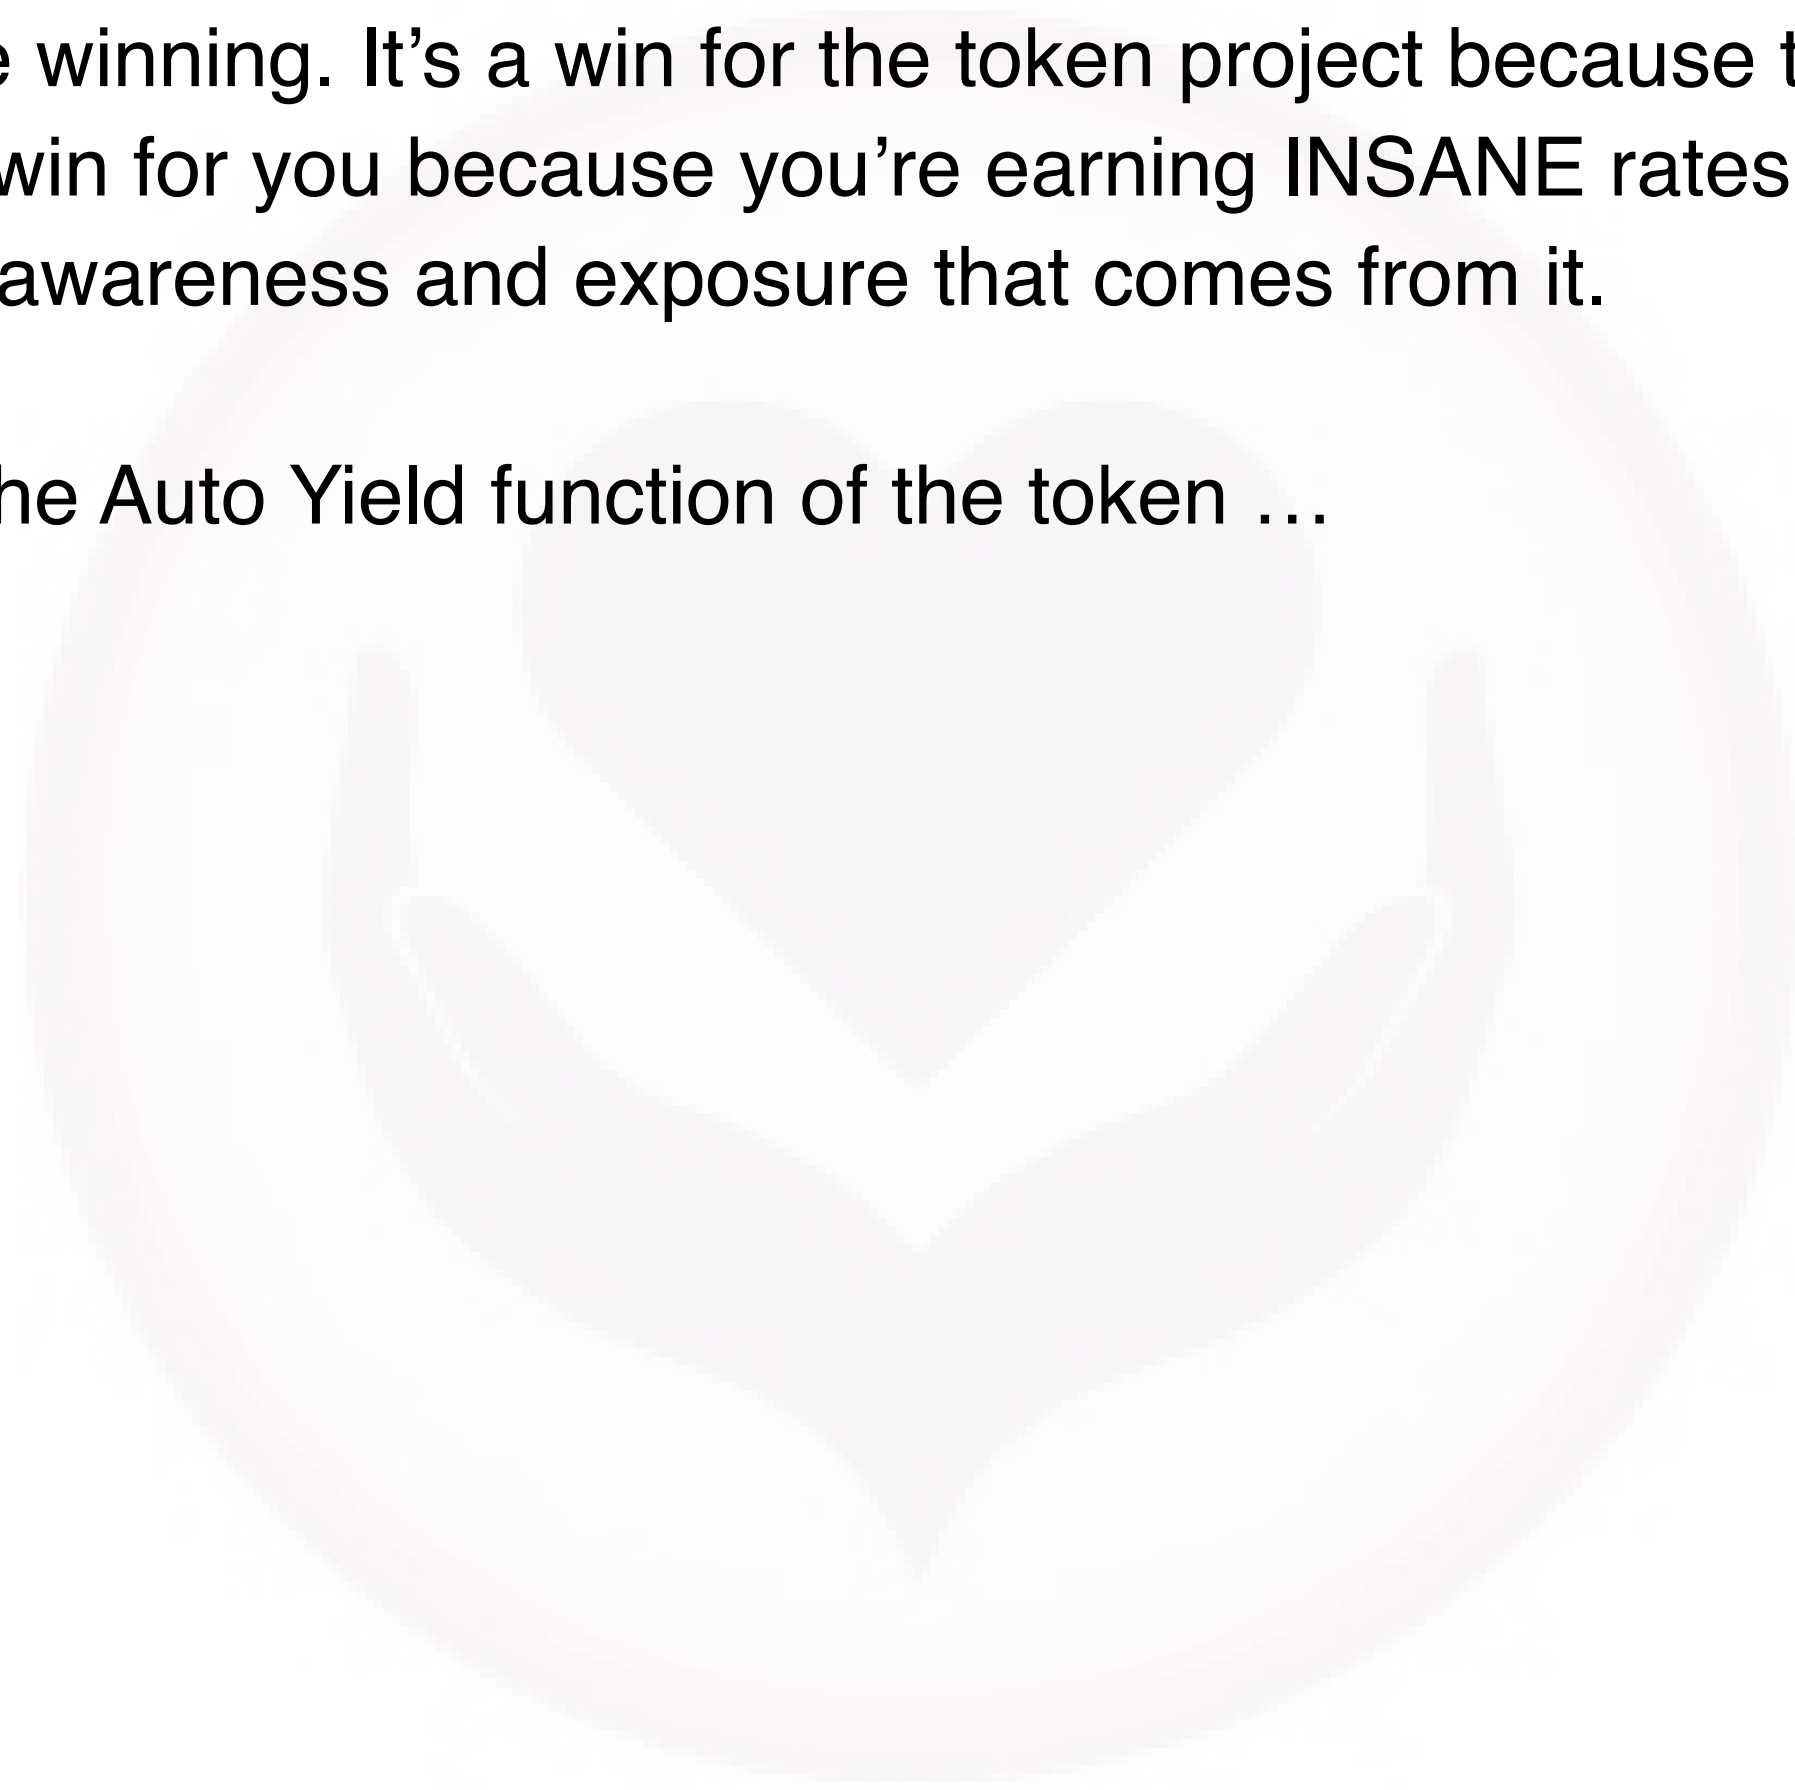

Not only will you be able to safely stake your tokens, but you'll be doing so at rates that most investors only dream about. Forget about putting funds into a bond, savings account, CD or generating dividends in the stock market. Yawn. We're talking about 20, 30, 60 ... even 150% or more APR.

Safe Funds + Insane Yields = Happy Investors.

Again, this is about everyone winning. It's a win for the token project because they're able to quickly create liquidity, it's a win for you because you're earning INSANE rates and it's a win for SDVF because of the brand awareness and exposure that comes from it.

Let's move on and address the Auto Yield function of the token ...

“Compound interest is the eighth wonder of the world. He who understands it, earns it... He who doesn't, pays it...”
– Albert Einstein

With each transaction, there is a 6% tax that is assessed. Out of that, a staggering 4% is automatically redistributed to holders. You got it ... your investment grows while you hold. Nothing else is needed on your part.

You don't have to use a pool, a farm or anything else - kick back, throw your feet up and watch the amount of coins you own increase - in direct proportion to the size of your bag.

You're likely familiar with the brut power of compounding (this is exactly how banks and financial institutions get filthy rich). Compounding is essentially starting with a fixed amount of money ... and earning a fee (interest) on it. It quickly grows over time. Auto yield and auto compounding is no different. This token has BOTH of those essential “get rich” features **ALREADY BUILT IN.**

Imagine if you had a dollar ... and each day you earned just a penny on that dollar (1%). At the end of the month you have more than just a 30% gain because each day you're getting a yield on that 1% that was also added each of the prior days. And it's ALL done automagically.

This is exactly how the rich get richer. They're smart. They're truly allowing their money to work FOR THEM.

AUTO YIELD + AUTO COMPOUNDING = A VERY FAT WALLET.

It's the "secret sauce" for the vast majority of how wealth is created by the richest people on the planet.

And ... it's already built into the contract. You will automatically receive MORE tokens in your wallet. The amount you receive is in proportion to the amount of \$SDVF you're holding. That is incredibly powerful.

Ever heard of the Rothschild family? They swim in money because they truly mastered and understood the power of compounding and making more money off the same money.

Now, you're leveraging that same level of power with this project. It's built directly into the tokenomics (more on that shortly).

That leads me to the final pillar of SDV.Finance ...

A Never Seen Before, 100% Unique Swapping Platform With More Features And Ways To Profit Than You'll Know What To Do With ...

SDV. FINANCE

BUY NOW

One of the most exciting pieces of this project is the swapping platform that we're building from the ground floor.

Our team loves crypto and we've been trading coins, tokens, degen projects (long before most even knew what they were), and various other asset classes for years.

When we first decided to build this, we asked ourselves one simple question ...

“If we're building it from scratch, what do we want it to be capable of doing?”

The answer was simple. **Provide one tool, in one central location that made making profitable trades easier.**

That's it. As simple as that sounds, the answer itself is a bit more complicated. The coding, the

SDV.FINANCE

THIS
IS JUST
THE BEGINNING

integration of several UI's, databases, security and so much more...

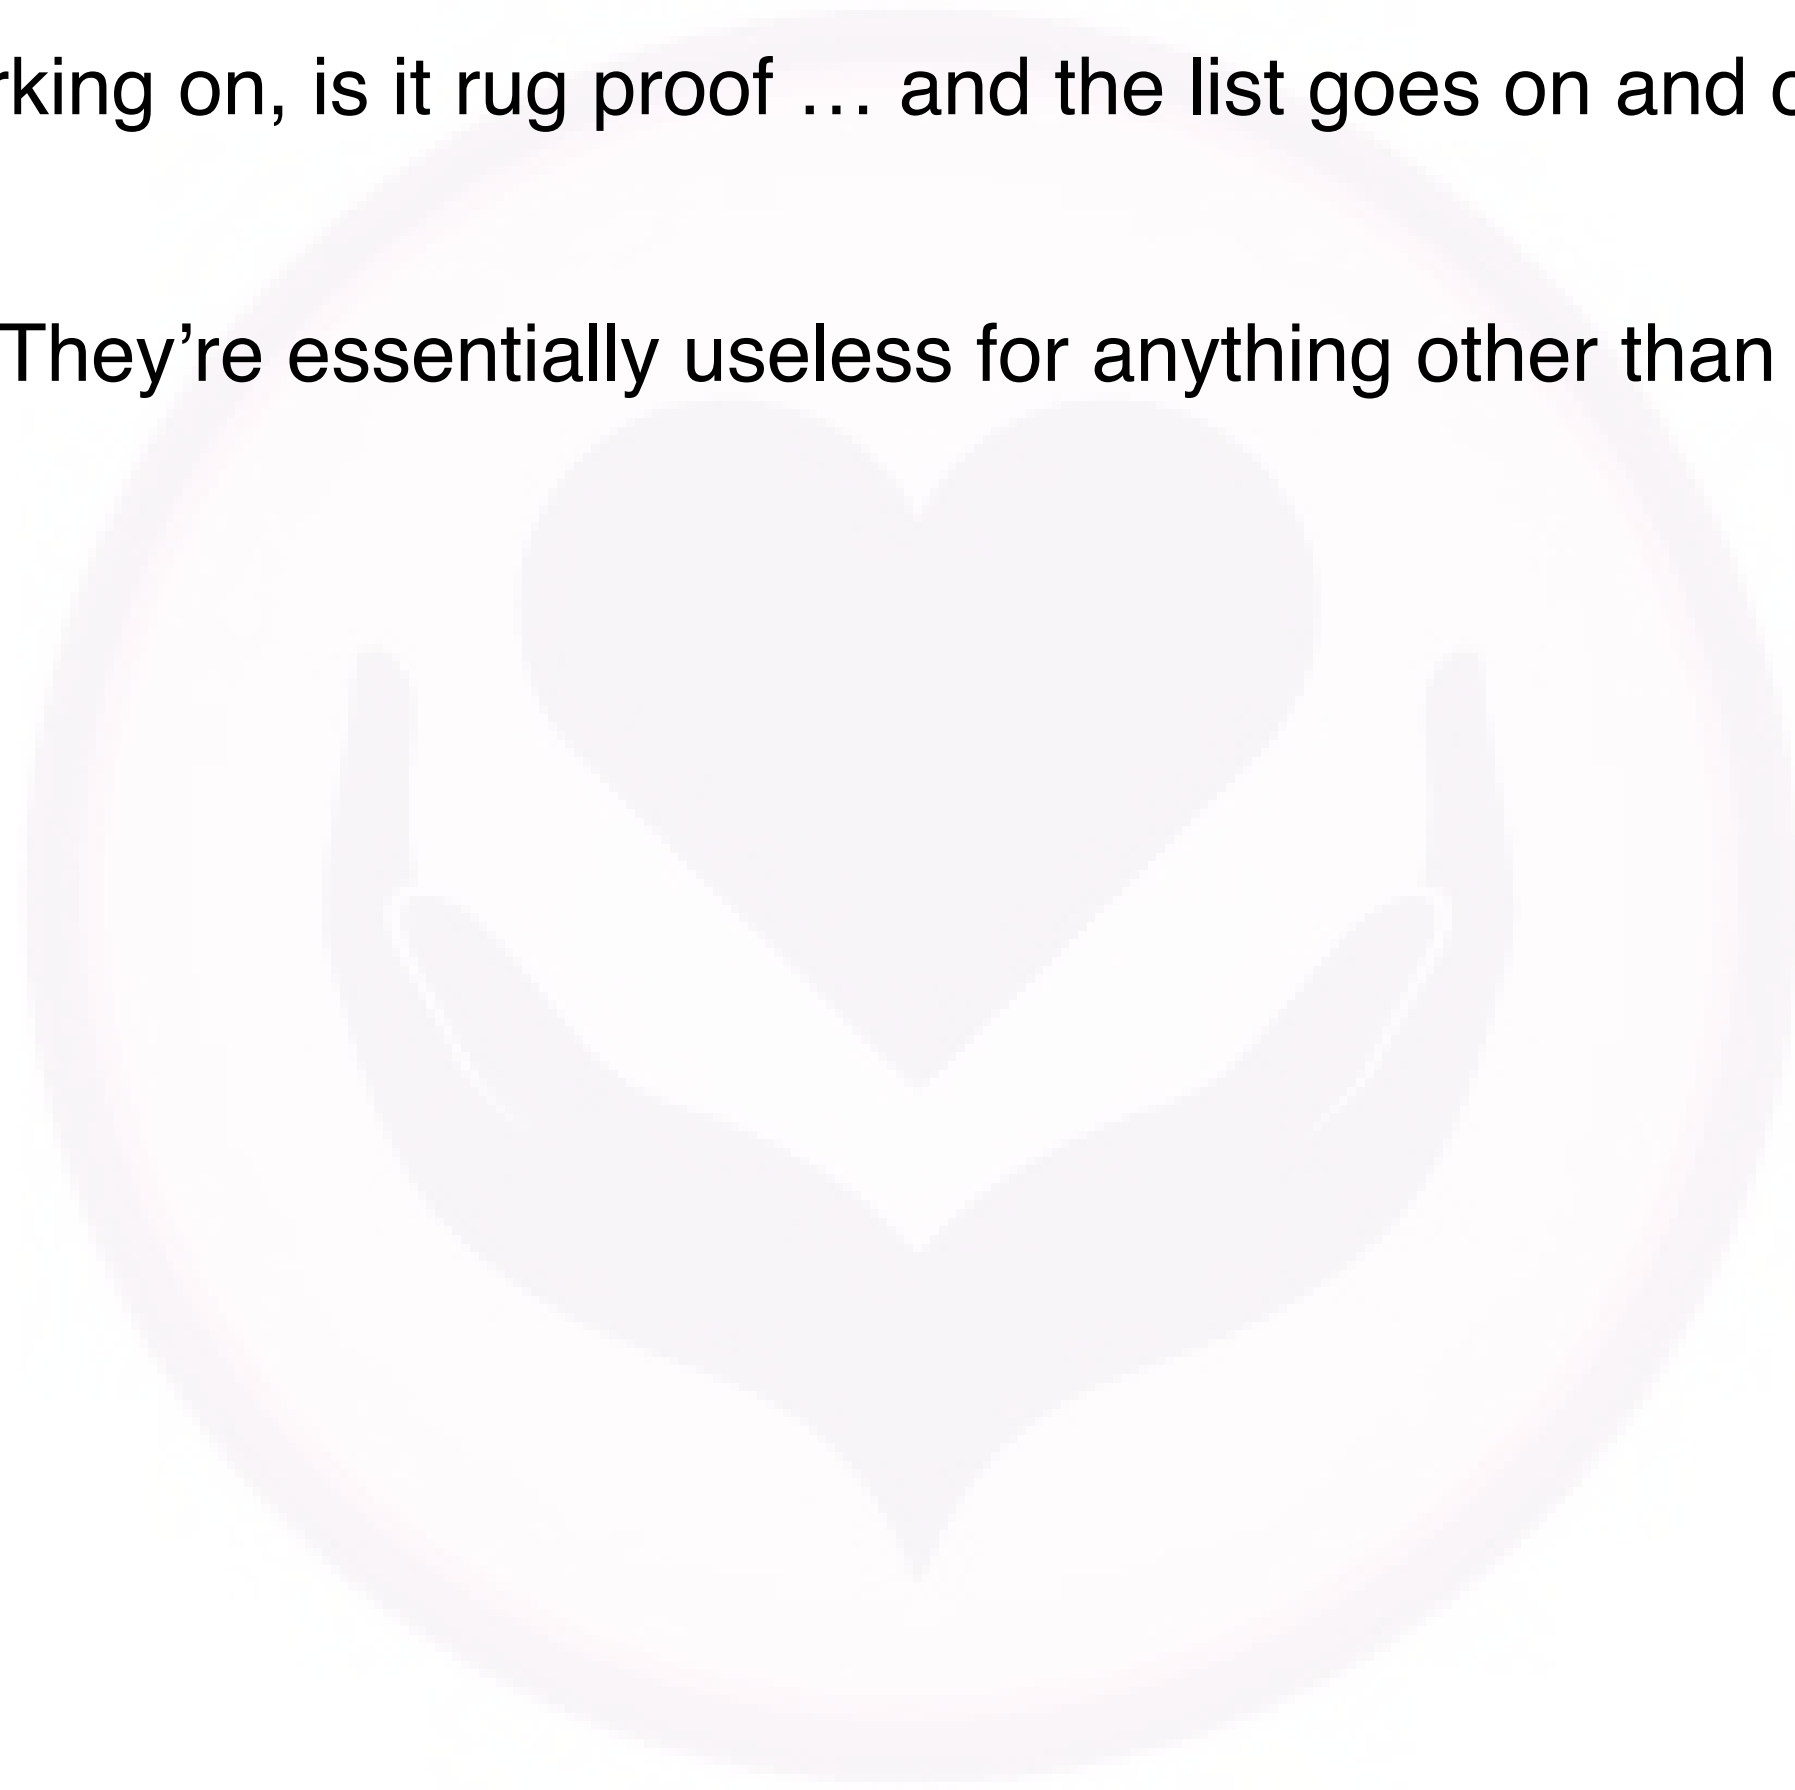

We knew we wanted to create a DEX, but we also knew it would be a daunting task and we wanted to build a platform that truly was built by traders for traders.

This led to countless 2 AM meetings where we would just talk and share ideas for hours. And what we came up with was nothing more than pure magical.

Let's be candid here ... the DEX's that exist today simply don't cut it. They're outdated, provide almost zero insight into a viable entry point, relevant news, are there influencers pushing it, do they have a solid community, what's the dev team really working on, is it rug proof ... and the list goes on and on.

They're clunky. They're aged. They're essentially useless for anything other than executing a trade

It was sleek, lightning fast (for technology at the time), vibrant and it had so much functionality. It changed the game so much in fact and so quickly that it brought many phone makers to their knees...

Think Motorola. Think Nextel. What about Blackberry... and Nokia. Yeah, they're still around. They're also on life support as they bleed out.

The SDV.Exchange has the power to be THAT disruptive. Think I'm full of shi@ and voicing some crazy dream? Nope. Not even close.

What if you had a platform that notified you when a crypto influencer just uploaded a new video to their YouTube channel?

What if you were notified minutes or hours before there was a big marketing push that drove traffic to that video?

Would that give you an edge? Of course it would ... you'd be able to buy the token before others were exposed to the video.

Buy early ... wait for others to buy in when they see the video ... price goes up.

This Isn't Rocket Science, BUT ... We MUST Have The Right Tool For The Job

You don't use a hammer on a screw right? The reason that many lose money in this great industry isn't because they're not trying or because they're not smart... you guessed it, they don't have the right tool to get the job done!

What if you received a notification when EVERY contract was verified on Bscscan.com. Would that be an asset for you? Of course it would be.

We're just scratching the surface ...

What if you could click a button and it would tell you if the project is likely a rug or not?

What about getting a notification the moment a new coin was listed on CoinGecko or Coin Market Cap or elsewhere? Starting to get the idea?

Again, this isn't rocket science. You just need the right tool. The right resources under the same roof that makes making money easier, faster and more efficient.

To put it mildly, this is a tool that SIMPLIFIES buying and selling of crypto.

Advanced charting? You bet. That's in it. Alerts for breaking news for tokens you're following? Don't worry... we've got your back. Ability to place limit orders and stop losses? We've got your back there too.

Need an emergency exit button? We've got you covered there too.

There's more than 40 features built into this hog ... just waiting for your grubby little paws to get on it. Honestly, if someone can't make more profitable trades, more consistently and easier than ever before using this highly refined, incredibly smart and lightning fast DEX, they should walk away from crypto.

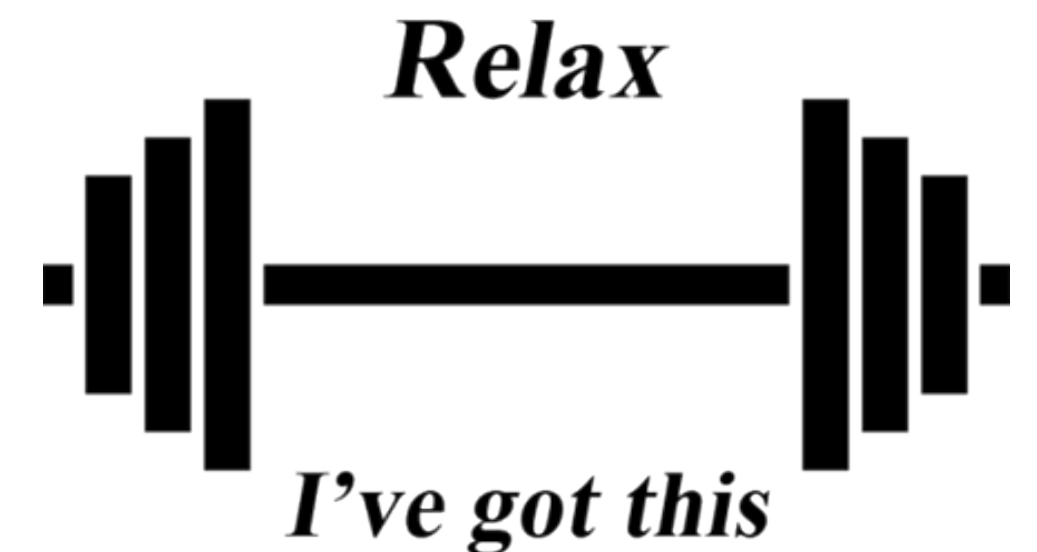

Don't pass Go. Don't collect your \$200. Just get out. Crypto isn't for everyone. This tool does the HEAVY LIFTING so you don't have to.

It does the hard stuff. It sorts, filters, charts, notifies ... just about anything under the sun short of tying your shoes (and don't go there ... our devs are bad asses. If you ask them to create a tool that will do that, they'll likely find a way to get 'er done).

The Craziest Part Is Our Attorneys Have Told Us Not To Share All The Features Here ...

It's true. Some of these items we're incorporating into this "ATM Machine" are so detailed, unique and do I say PURE FUCKING GENIUS that we're in the process of securing patents so others don't try to copy cat us - even though they will attempt to.

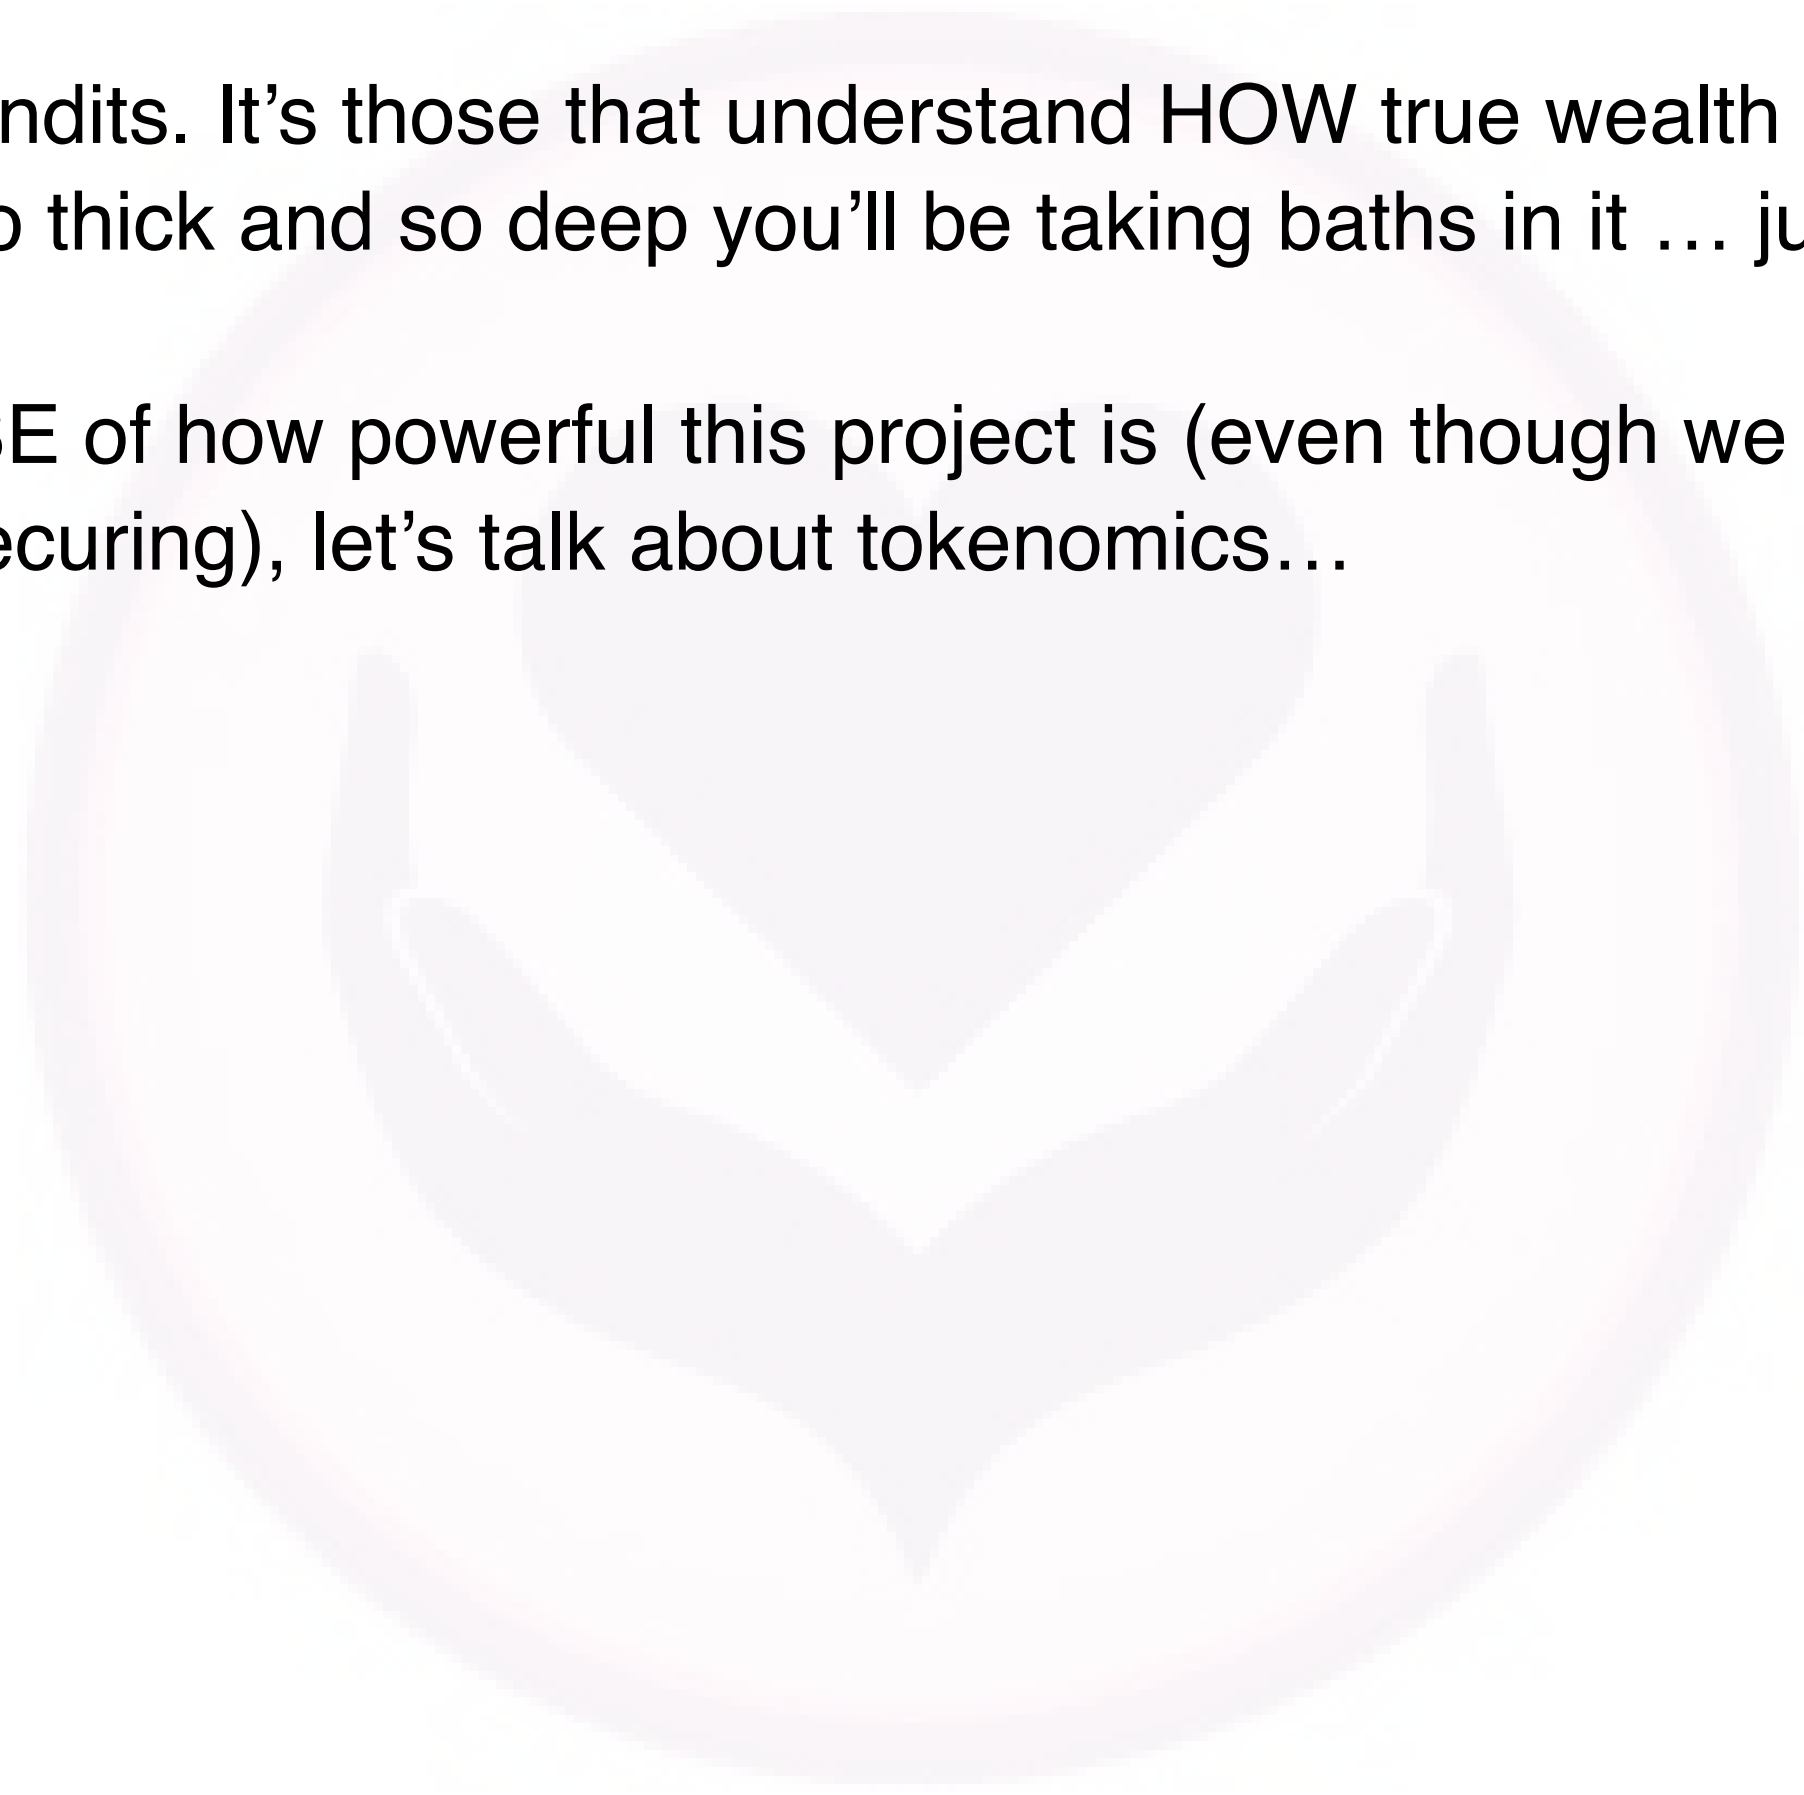

In a nutshell, this money-puking technology is a game changer.

It's the Apple of the early 2000's. It's the ONE area of crypto that desperately NEEDS to be reinvented. And you know what they say about the early bird, right?

First movers make out like bandits. It's those that understand HOW true wealth is created that will be rewarded with piles of cash so thick and so deep you'll be taking baths in it ... just for the hell of it.

Now that you have a GLIMPSE of how powerful this project is (even though we can only legally share about of it due to patents we're securing), let's talk about tokenomics...

“When you bring the right team together who genuinely wants to disrupt an industry and you combine that with talent and an unwavering passion to succeed, great things are going to happen”.

Duff / SDVF, Captain Of Marketing

The Tokenomics... And How We Plan To Create Wealth For Hodlers.

BUY NOW

SDV. FINANCE

We started with a trillion tokens. That's a lot of zeros.

Too many actually, so we burned a bunch ... about 50% and we're still conducting burns too.

There's that 6% tax we touched on earlier ...

4% is redistributed to hodlers. Remember that earlier speech about the power of auto yield and compounding?

It's pure magic and incredibly powerful. That's where this comes into play.

Just for hodling, YOU get rewarded. Every day your tokens are increasing. So, not only can you profit from the price of the token appreciating, but you also have tokens automagically being added to your wallet.

Auto Yield + Auto Compounding = the most explosive method on the planet to create wealth.

Each day your tokens are growing automatically based upon the size of your \$SDVF bag ... and it's auto compounding because it's adding a percentage each day based upon the amount you were holding yesterday.

Because of that, the amount of tokens you receive today will be larger than yesterday and the amount you get tomorrow will be larger than today's. With me? Good!

Again, all of this is done in the background through the contract itself. So there's NOTHING that needs to be done on your part. Just hodl. And be rewarded for doing nothing. :)

1% of the tax goes to paid marketing, celebrity partnerships, and influencers. This ensures we'll always be growing the community and building for tomorrow.

1% charity. This portion of the tax will go to donations we'll be making to global organizations that are doing their part to combat and bring awareness to domestic abuse issues.

Our team wallet holds 5%. These will cover patent/legal fees, potential exchange listings, administrative costs, regulatory expenses, consulting fees and development costs (primarily for the DEX).

Also, we have burned 100% of the liquidity

And, we have self funded 100% of the project. Launch was a fair sale. No ICO. No presale. We are COMPLETELY funding this out of our own pocket.

Now that we've addressed the 4 main pillars of why you should be part of SDV.Finance and our tokenomics, let's talk about our timeline and narrow down some dates that we expect to take place ...

Here's Where We're Heading ...

2021 MAY/JUNE CONCEPT

2021 NOV/ Staking

Looking further out...

2022 / Q1

Custom Swapping Platform - we're hoping to be beta testing this by March, 2022.

Due to the many moving parts of the DEX, new features and updates will continuously rolled out.

(Again, not all features are here due to needing to secure patents on some of them)

Including:

Advanced Charting

Lending & borrowing abilities

Influencer triggers/new content published

Portfolio Tracking

Limit Orders

New Media Exposure

New/Recent Influencer Promoting Project

Stop Losses

Emergency Exits

“If/Then” Trading Execution

Token Screener

=>Filter Based Upon:

Abnormal Trading Volume

And that’s just a taste of the DEX. It is going to change the game and it will absolutely flat-out embarrass what’s in the marketplace today.

Let’s move on and meet the team, shall we?

Meet Your Rockstar Team!

These are the folks you’ll be working with. And make no mistake, this team works for you. Not the other way around.

Newly Listed Tokens

% Movement Up Or Down

Time Since Liquidity Was Added

News/media exposure

Social Media Mentions/Trending

(And So Much More).

LET'S START WITH BAX.

She's a ball of energy and the gal that really is the glue of this organization. From scheduling to accountability, to ensuring others on the team are eating and sleeping well ... she's the momma hen.

And we love her. She brings a SHIT TON of value to the group. She's kind (but can crack the whip when needed), nurturing and she's incredibly smart.

Don't let her good looks fool you. She understands crypto, she understands the many layers of this project and she's fantastic at forging forward because she's incredibly resilient.

You should also know that Bax herself was a big driving force of the WHY behind this project. She was a victim of domestic violence.

She lived in an abusive relationship for 17 years before one day gaining the courage to leave with her two small children and a few belongings.

She's been there. She's done that. Sadly, she gets it. She understands, first hand, how ESSENTIAL this project really is for millions of men and women throughout the world.

Bluntly put, this team wouldn't be here without Bax. Spend 20 minutes in our Telegram and you'll see her nurturing and loving heart.

Bax

BAX

SDV. FINANCE

MEET GOORUU PAUL.

We can surmise Paul in one word. BEAST.

Whether it's coding, design, graphics, aesthetics/layout or just about anything "techy", Paul is your guy.

He's well versed in so many technical areas. His work ethic is unlike anything you've seen before. We can have meetings that run until 10PM or later and he'll be sending emails at 2 the next morning. We're not sure how he does it, but we're convinced he's not human.

Anytime you see a site update, a new widget or do-hickey, more than likely it's Paul you can thank. He's worked in the IT and website design and coding space for more than 30 years.

When he says something can't be done (which almost never happens), we know that to be fact and move in another direction.

And, Paul's probably the most detailed person we know. The reason you found 38 typos and grammar errors in "The Manifesto" is because Paul didn't proof read it.

We love Paul and are deeply blessed to have him on the team.

Paul, "President of Online Affairs"

A handwritten signature of Paul in black ink, written vertically.

NEXT UP ... MEET MAGIC MO

Moe is our “all things graphics” guy. And what he creates is pure magic (hence his name, “Magic Moe”). He’ll take some of the most mundane and flat-out boring text and turn it into a magical piece of art.

He’s not just a graphics designer either ... Moe can create websites soup to nuts. Design, build, beautify and roll it all out on a silver platter.

Multitalented. Skills that many would die for and he has jokes, too. There’s 2 things that are certain if you ever hang out with Moe You’re going to eat like a KING (because he’s an amazing chef) and you’re going to be laughing the entire time. Whut?! A tech dude who’s also hilarious... yes, unicorns do exist.

Moe, we love you man. You’re an asset to this team and the community is incredibly lucky to have you on board.

Moe, “Chairman of All Things Graphics”

A handwritten signature in blue ink that reads "Moe".

LASTLY, MEET DUFF.

Duff's an advertising and marketing guy. He understands online media and scaling at a level very few on this planet can match.

Duff owned a sales and marketing training agency for 16 years before selling it in 2016. His ability to understand human psychology, what makes them tick, what is at the very core of what they're looking for and then getting them to take an action that brings them one step closer in that direction is at the center of what Duff does.

When he's not in the Telegram, he's likely to be found writing copy for banner ads, working on creatives, checking stats on the various ad networks we advertise on or working on sweet idea with the team to help take things to the next level.

Duff has driven more than 100,000 unique website visitors in a single day. He knows advertising and digital media like the back of his hand.

He's also astutely aware of how a successful campaign comes together, how to sequence events and how to simplify the complicated to flat-out bring results.

Duff is a big thinker, he's always taking action and he's decisive like few you've met before. His understanding of online marketing and how to stand out in a hyper competitive ad world are just a couple reasons why we're blessed to have Duff on the team.

Our Team May Be Small, But We Flat-Out Get Stuff Done

We hustle and work HARD because we know exactly what it takes to build, to scale and to differentiate ourselves in the market place.

We're incredibly proud of this project, passionate and beyond stoked to help change so many lives ... at so many different levels.

By now I hope you're starting to get the feeling that we're real people. Real people that have a big dream.

A burning desire to make the world just a little bit better ... and change the crypto community too by offering a DEX that truly is going to change the game. Not to mention the tokenomics and auto yield and the staking that's coming as well.

This isn't your normal project. This isn't some shit coin that will be gone in 3 months. We are on a mission and we're creating a movement.

HERE'S WHY YOU SHOULD GRAB A BAG OF \$SDVF:

- Liquidity burned (proof on website)
- DEX coming that is like NOTHING you've seen before
- Donations made to a worthy cause that genuinely needs more attention and there needs to be more conversations about domestic abuse
- A rockstar team who's fully committed and passionate
- Big marketing budget
- Auto Yield & compounding
- An amazing community
- Some of the largest influencers in the crypto space have partnered with us – as well as several celebrities (and that number is always growing)
- High yield staking
- Liquidity is burned
- Project is entire self funded (no presale, no big ICO launch silliness, no outside investors)

Final thoughts: Hopefully you see this project has a vision. A big, aggressive vision. It has incredibly passionate individuals behind it.

Not only is it funding an incredible cause, but it will also have unique utility as well.

We hope to see you inside our family.

If you have questions, don't hesitate to ask away!
